Data Analysis Course

SYLLABUS DATA ANALYST

Sujit Kumar Singh

Founder of IPT Excel School

Online Live Trainer

From 2007 to Tilled

OUR STORY

“

With over two decades of experience in Excel, I have honed my skills as an MIS Executive and VBA Developer across more than 10 companies. Currently, I serve as a Report Consultant for 40 companies, delivering tailored solutions and expert advice.

My journey with Excel began in 2003, and since then, I have dedicated myself to mastering its intricacies and applying my knowledge to solve real-time official problems.

I not only teach Excel but also provide comprehensive support for a wide range of business challenges. My goal is to empower professionals to leverage Excel's full potential and enhance their productivity. Join me to gain practical insights and tackle real-world issues effectively.

Online Live Trainer

From 2007 to Tilled

CURRICULUM

Data Analyst

in Power BI, enabling me to create dynamic and interactive dashboards for data visualization and business intelligence

Learn Core Python and

Python enables me to automate processes, analyze complex datasets, and develop custom solutions to meet specific business needs

SQL allows me to manage and analyze large datasets efficiently, design complex queries, and ensure data integrity

specialize in advanced Excel techniques, including complex formulas, data analysis, automation

create dynamic and interactive dashboards for data visualization and business intelligence

With MS Excel and Power BI

VBA allows me to automate repetitive tasks, create custom functions, and streamline complex workflows within Excel

Part -1

Advanced Excel and Dashboard

Large Data Selection and Shortcuts

Complicated Calculation with Math Operators

Advanced Paste Special and Picture Lookup

Custom and Conditional Formatting for Dashboard Reporting

Excel In-Built AI in Excel and Data Handling (Short - filter)

Advanced Pivot and Power Pivot

Making Dashboard with Pivot and Pivot Chart

Mastering Formulas and Functions

> 300 Formulas with Array Formulas

make own Formulas without using VBA use LAMBDA

Data Analysis and Visualization - Dashboard

Data Management and Automation

Advanced Data Tools

Power BI and Data Connectivity from Common Data Source

Collaboration and Security

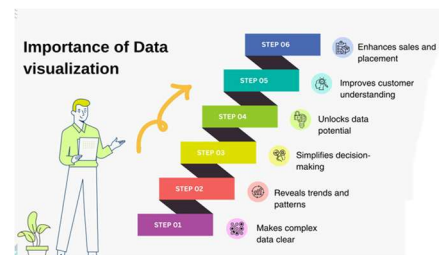

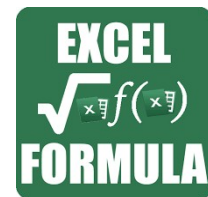

Case Studies and Projects

Conclusion

Review of key concepts and skill: Q&A and troubleshooting common issues

Final projects and practical applications

This advanced course will equip you with the skills needed to excel in data analysis, automation, and visualization using Excel

Part -2

POWER BI Dashboard and DAX

Introduction to Power BI and Power BI tools and services

Requirements Gathering

Extract, Transform, and Load (ETL) Data

Power BI Desktop

Data extraction and transformation

Data modeling and formatting

Designing Reports

Creating interactive and visual reports

Using visualizations and fields

Using Power Query and Data Analysis Expressions (DAX)

Building and sharing dashboards

Advanced DAX functions

Power BI Cloud and Report Server

Security and data management

Advanced Data Modeling and DAX

Real-World Case Studies and Best Practices

Power BI Desktop

Creating Impactful Visual Reports

Conclusion

This detailed outline should provide a comprehensive and in-depth learning experience for anyone looking to master Power BI.

Part -3

Python Data Analysis & Visualization

Introduction to Python for Data Analysis

Python Basics and Core Python

Data Manipulation with Pandas

Data Visualization with Matplotlib and Seaborn

Statistical operations with NumPy

Exploratory Data Analysis (EDA)

Working with Time Series Data

Statistical Analysis

Reshaping and Pivoting Data

Combining Data

Data Cleaning and Preprocessing

Big Data and Distributed Computing

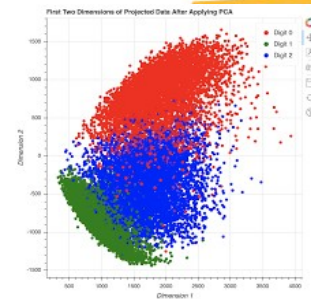

Big Data and Distributed Computing

Advanced Dashboard Design and Development

Building Dashboards with Streamlit

Introduction to GUI Development in Python with TKINTER and PyQt

Practical Case Studies and Projects

This outline should give you a solid foundation in Python for data analysis. If there are specific areas you want to focus on

Part -4

VBA Macros for Report Automation

Basics of VBA Programming

VBA syntax and basic programming concepts

Variables, data types, and constants

If...Then...Else statements

For...Next DO While - Until loops

Working with Excel Objects

Understanding Excel object model (Workbook, Worksheet, Range, Cells)

Functions and Subroutines

Error Handling and Debugging

User Forms and Controls

Working with External Data

Accessing and manipulating external databases (ADO, DAO) with SQL

Working with charts and graphics

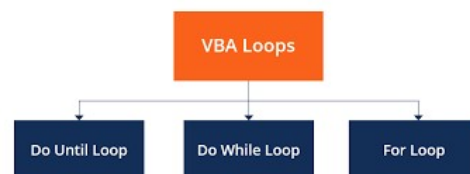

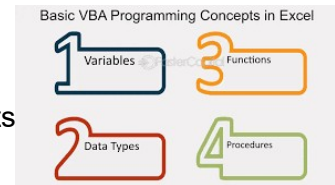

Automating repetitive tasks and processes

Ensuring code security and protection

Real-World Examples and Projects

Building practical VBA projects (e.g., invoice generator, report automation)

This comprehensive outline should guide you through learning VBA and help you develop powerful automation solutions.

Automation of Tasks

Part -5

SQL Server 2022 with Query

Overview of SQL Server 2022

Installation and setup

SQL Server architecture

Introduction to SQL Server Management Studio (SSMS)

Data Types and Table Structures

Querying Data

SELECT statements

Filtering data with WHERE clause

Using JOINS to combine tables

Advanced Querying Techniques

Subqueries and nested queries

Set operators (UNION, INTERSECT, EXCEPT)

Data Manipulation and Transactions

INSERT, UPDATE, DELETE statements

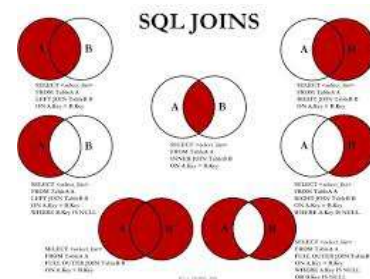

Error handling and TRY...CATCH blocks

User-defined functions (UDFs)

Advanced Data Management

Roles and permissions

Real-World Case Studies and Best Practices

Try-Catch Error Handling
